

Training basic coding

Coding is the language of the digital age, which powers all the computer systems, apps, websites and software that we use every day. If you are interested in learning how to code, this two-day training course would be perfect for you. You will be introduced to the basics of coding, and gain a better understanding of how coding is utilised to enable us to communicate with our computers and tell them what we want them to do.

No coding experience is required for the course – it does not matter if you have dabbled in coding previously or have never written a single line of code. During the course, you will learn how coding works and will be guided through the basics of coding using the Python programming language.

Programme 2019:

Module 1: Innovation and new technologies

May 14 and 15; June 7

Module 2: Big data and digital marketing strategy

June 18 and 27; July 2

Module 3: Transformation strategies, business processes and technology

September 3 and 18; October 3

Module 4: Digital transformation and leadership

October 30; November 14 and 15

Karin de Vries

The Python course was exhausting and fun at the same time. It motivated me to continue to learn coding.

Agile change and project manager at Nationale-Nederlanden

Bo Bakker

This hands-on training allowed me to experience what it takes to build something from scratch. It gave me the opportunity to see things through the eyes of a developer.

Transformation Manager ING Tech

Magriet van den Beuk

Yes! I can still programme and I really liked it!

Senior IT manager at PGGM
